NEUROINSIGHT AI RADIOLOGY REPORT

=====

Scan ID : MRI-2026-32215

Date/Time : 29 May 2026 | 12:02 PM

=====

1. MRI VALIDATION

=====

Result:

Valid Brain MRI Scan

Validation Confidence:

99.88%

=====

2. TUMOR CLASSIFICATION

=====

Detection Result:

Tumor Detected

Tumor Type:

Meningioma

Model Confidence:

87.86%

=====

3. TUMOR SEGMENTATION ANALYSIS

=====

Affected Brain Region:

2.27%

Tumor Area:

1489 pixels

Severity:

Mild

Location:

[164.08999328408328, 111.67763599731363]

Bounding Box:

[47, 41]

SHAPE ANALYSIS

ECCENTRICITY:

0.524

Description:

Mildly elongated

Interpretation:

Moderate eccentricity

SOLIDITY:

0.966

Description:

Compact and convex

Interpretation:

High solidity - well-defined margin

Shape Risk:

LOW SHAPE RISK - Compact regular morphology.

Segmentation Observation:

A moderate segmented lesion occupying 2.27% of the brain region was identified. The lesion appears compact and convex with mildly elongated morphology located near X=164.1, Y=111.7.

=====

4. TUMOR PROFILE

=====
Description:

Usually benign extra-axial brain tumor arising from meninges.

Characteristics:

- Well-defined margins
 - Slow-growing
 - Extra-axial lesion
- =====

5. RISK ASSESSMENT

=====
Risk Level:

LOW RISK

Suggested Action:

Specialist consultation recommended.

=====

6. AI MEDICAL SUMMARY

=====
MRI findings suggest meningioma with localized tumor involvement.

=====

7. RECOMMENDATIONS

- =====
1. Neurology consultation recommended
2. Periodic MRI follow-up advised
3. Monitor tumor growth progression
- =====

8. DISCLAIMER

=====
This report is AI-generated and intended for
educational/research purposes only.

Final diagnosis must always be confirmed
by qualified medical professionals.
