NEUROINSIGHT AI RADIOLOGY REPORT

=====

Scan ID : MRI-2026-40729

Date/Time : 27 May 2026 | 03:30 PM

=====

1. MRI VALIDATION

=====

Result:

Valid Brain MRI Scan

Validation Confidence:

99.99%

=====

2. TUMOR CLASSIFICATION

=====

Detection Result:

Tumor Detected

Tumor Type:

Meningioma

Model Confidence:

90.75%

=====

3. TUMOR SEGMENTATION ANALYSIS

=====

Affected Brain Region:

0.82%

Tumor Area:

536 pixels

Severity:

Very Small

Location:

[78.6660447761194, 85.03731343283582]

Bounding Box:

[28, 26]

SHAPE ANALYSIS

ECCENTRICITY:

0.614

Description:

Moderately elongated

Interpretation:

Elevated eccentricity

SOLIDITY:

0.947

Description:

Compact and convex

Interpretation:

High solidity - well-defined margin

Shape Risk:

LOW SHAPE RISK - Compact regular morphology.

Segmentation Observation:

A small segmented lesion occupying 0.82% of the brain region was identified. The lesion appears compact and convex with moderately elongated morphology located near X=78.7, Y=85.0.

=====

4. TUMOR PROFILE

=====

Description:

Usually benign extra-axial brain tumor arising from meninges.

Characteristics:

- Well-defined margins
 - Slow-growing
 - Extra-axial lesion
- =====

5. RISK ASSESSMENT

=====

Risk Level:

LOW RISK

Suggested Action:

Regular MRI monitoring recommended.

=====

6. AI MEDICAL SUMMARY

=====

MRI findings suggest meningioma with localized tumor involvement.

=====

7. RECOMMENDATIONS

- =====
1. Neurology consultation recommended
 2. Periodic MRI follow-up advised
 3. Monitor tumor growth progression
- =====

8. DISCLAIMER

=====

This report is AI-generated and intended for educational/research purposes only.

Final diagnosis must always be confirmed
by qualified medical professionals.
