NEUROINSIGHT AI RADIOLOGY REPORT

=====

Scan ID : MRI-2026-52560

Date/Time : 27 May 2026 | 03:47 PM

=====

1. MRI VALIDATION

=====

Result:

Valid Brain MRI Scan

Validation Confidence:

100.00%

=====

2. TUMOR CLASSIFICATION

=====

Detection Result:

Tumor Detected

Tumor Type:

Meningioma

Model Confidence:

86.37%

=====

3. TUMOR SEGMENTATION ANALYSIS

=====

Affected Brain Region:

0.07%

Tumor Area:

48 pixels

Severity:

Very Small

Location:

[153.08333333333334, 110.125]

Bounding Box:

[8, 7]

SHAPE ANALYSIS

ECCENTRICITY:

0.837

Description:

Highly irregular / elongated

Interpretation:

High eccentricity - aggressive morphology

SOLIDITY:

0.906

Description:

Compact and convex

Interpretation:

High solidity - well-defined margin

Shape Risk:

MODERATE SHAPE RISK - Some irregular morphology detected.

Segmentation Observation:

A small segmented lesion occupying 0.07% of the brain region was identified. The lesion appears compact and convex with highly irregular / elongated morphology located near X=153.1, Y=110.1.

4. TUMOR PROFILE

=====
Description:

Usually benign extra-axial brain tumor arising from meninges.

Characteristics:

- Well-defined margins
 - Slow-growing
 - Extra-axial lesion
- =====

5. RISK ASSESSMENT

=====
Risk Level:

LOW RISK

Suggested Action:

Regular MRI monitoring recommended.

=====

6. AI MEDICAL SUMMARY

=====
MRI findings suggest meningioma with localized tumor involvement.

=====

7. RECOMMENDATIONS

- =====
1. Neurology consultation recommended
2. Periodic MRI follow-up advised
3. Monitor tumor growth progression
- =====

8. DISCLAIMER

=====
This report is AI-generated and intended for
educational/research purposes only.

Final diagnosis must always be confirmed
by qualified medical professionals.
