NEUROINSIGHT AI RADIOLOGY REPORT

=====

Scan ID : MRI-2026-12931

Date/Time : 27 May 2026 | 03:51 PM

=====

1. MRI VALIDATION

=====

Result:

Valid Brain MRI Scan

Validation Confidence:

99.88%

=====

2. TUMOR CLASSIFICATION

=====

Detection Result:

Tumor Detected

Tumor Type:

Meningioma

Model Confidence:

63.72%

=====

3. TUMOR SEGMENTATION ANALYSIS

=====

Affected Brain Region:

0.95%

Tumor Area:

620 pixels

Severity:

Very Small

Location:

[147.7758064516129, 107.60483870967742]

Bounding Box:

[45, 77]

SHAPE ANALYSIS

ECCENTRICITY:

0.656

Description:

Moderately elongated

Interpretation:

Elevated eccentricity

SOLIDITY:

0.94

Description:

Compact and convex

Interpretation:

High solidity - well-defined margin

Shape Risk:

LOW SHAPE RISK - Compact regular morphology.

Segmentation Observation:

A small segmented lesion occupying 0.95% of the brain region was identified. The lesion appears compact and convex with moderately elongated morphology located near X=147.8, Y=107.6.

=====

4. TUMOR PROFILE

=====

Description:

Usually benign extra-axial brain tumor arising from meninges.

Characteristics:

- Well-defined margins
- Slow-growing
- Extra-axial lesion

=====

5. RISK ASSESSMENT

=====

Risk Level:

LOW RISK

Suggested Action:

Regular MRI monitoring recommended.

=====

6. AI MEDICAL SUMMARY

=====

MRI findings suggest meningioma with localized tumor involvement.

=====

7. RECOMMENDATIONS

=====

1. Neurology consultation recommended
2. Periodic MRI follow-up advised
3. Monitor tumor growth progression

=====

8. DISCLAIMER

=====

This report is AI-generated and intended for educational/research purposes only.

Final diagnosis must always be confirmed
by qualified medical professionals.
